The Prescrire Awards 2014

The three annual Prescrire Awards, for Drugs, Packaging and Information, are granted in total independence by the Prescrire Editorial Staff. These awards complement the annual review published at the beginning of each year in our French edition and a review of new drugs and indications in 2014 to be published in the April issue of Prescrire International. The rules governing the Prescrire Awards are available online at english.prescrire.org.

2014 Prescrire Drug Awards

Products evaluated during the previous year in the New Products section of our French edition are eligible for the Prescrire Awards for new drugs and indications.

- 2007 (Prescrire Int n° 94) CARBAGLU° (carglumic acid) (a second look)
- 2006 (Prescrire Int n° 88) ORFADIN° (eolidine)
- 1998 (Prescrire Int n° 40) CRIXIVAN° (indinavir)
- 1996 (Prescrire Int n° 28) Digidot° (digoxin-specific antibody) (1)
- 1992 (Prescrire Int n° 4) SURFEXO° (pulmonary surfactant) (1)
- 1989 (Rev Prescrire n° 92) EPREX° (epoetin alfa) • MECTIZAN° (ivermectin)
- 1988 (Rev Prescrire n° 81) LARIAM° (mefloquine) • RETROVIR° (zidovudine)
- 1987 (Rev Prescrire n° 71) LUTRELEF° (gonadorelin) • DECAPEptyl° (triptorelin)
- 1986 (Rev Prescrire n° 61) ZOVIRAX° iv and tablets (aciclovir)
- 1983 (Rev Prescrire n° 31) LOPRIL° (captopril)
- 1981 (Rev Prescrire n° 10) HEVAC B° (hepatitis B vaccine)

1- No longer marketed in France.
These awards honour drugs that constitute a therapeutic advance, in that they offer better efficacy, fewer or less severe adverse effects (for similar efficacy), or safer or easier administration. The rules governing the Drug Awards are available online, at english.prescrire.org.

2014: a good vintage. Five drug awards have been earned this year: one Golden Pill, which has not happened in six years, three products have been included on the Honours List, and one was deemed “Noteworthy”.

Golden Pill for Orphacol° (cholic acid). Cholic acid (Orphacol°) constitutes a major advance for patients with one of the rare hereditary defects of primary bile acid synthesis, which are usually fatal during childhood. It prolongs survival considerably, provided treatment is initiated early. This drug has been in use in France for some time, but only through a temporary (compassionate) authorisation programme. It has been awarded a Golden Pill because its development and European marketing authorisation (MA) represent an important event for patients.

Three drugs on the Honours List and one Noteworthy. In children with a rare form of acute lymphoblastic leukaemia, with Philadelphia chromosome, the tyrosine kinase inhibitor imatinib (Glivec°) prolongs survival considerably. However, when Glivec° was authorised for this indication, it was not marketed in a dosage form appropriate for children. Severe malaria is rare in France, but a leading cause of death worldwide. Intravenous artesunate (Malacef°) has become the standard treatment for severe malaria. It is available in France through a temporary authorisation programme involving collection of data on the treated population. As of end of 2014, no companies have submitted a MA application to the European Medicines Agency for this drug.

In many patients with chronic hepatitis C in whom pharmacological treatment is justified, the NS5B polymerase inhibitor sofosbuvir (Sovaldi°) is an antiviral that is at least as effective as viral protease inhibitors and enables a shorter treatment duration, thus reducing the overall toxicity of antiviral therapy. Yet there are uncertainties about its long-term efficacy and its adverse effects. Its price is exorbitant, bearing little relation to research and production costs, with dangerous implications for any system of universal health care.

For patients with one of the rare urea cycle disorders, sodium phenylbutyrate prolongs survival but has only modest benefits on psychomotor retardation. The coating on Pheburane° sodium phenylbutyrate granules is an advance because it masks the drug’s unpleasant taste, which caused nausea and vomiting and compromised treatment adherence.

**Honours List**

Drugs are included on the Honours List because they represent a clear advance for some patients compared with existing therapeutic options, albeit with limitations.

**Noteworthy**

Drugs deemed “Noteworthy” provide a modest improvement in patient care.

---

Is this year an exception or the start of a new trend? It has been twenty years since so many drugs received Prescription Drug Awards. Let’s hope, for patients’ sake, that this is the start of a lasting trend rather than a one-off occurrence.

---

**2014**

- **GLIVEC° (imatinib)** Novartis Pharma – Acute lymphoblastic leukaemia in children (Prescrire Int n° 157)
- **MALACEF° (intravenous artesunate)** MA holder in China: Guilin Pharmaceutical, importer and distributor in France: ACE Pharmaceuticals – Severe malaria (Prescrire Int n° 154)
- **SOVALDI° (sofosbuvir)** Gilead Sciences – Hepatitis C (Prescrire Int n° 156)

**2010 (Prescrire Int n° 114)**

- **Glivec° (imatinib) (unresectable or metastatic gastrointestinal stromal tumours, with more follow-up)**

**2007 (Prescrire Int n° 98)**

- **Glivec° (imatinib) (chronic myeloid leukaemia, with more follow-up) • Herceptin° (trastuzumab)**

**2006 (Prescrire Int n° 84)**

- **Egaten° (triclabendazole)**

**2005 (Prescrire Int n° 77)**

- **Varivax° (varicella-zoster vaccine)**

**2004 (Prescrire Int n° 76)**

- **Diacomit° (steroid-free) • Fuzeron° (enfuvirtide) • Morphin-Aquettand® syrups (oral morphine) (1)**

**2003 (Prescrire Int n° 66, 69,74)**

- **Carbaglu° (carnitine acid) • FivheBen° (hepatitis B immunoglobulin) • Meningilbac° (conjugate meningococcal C vaccine)**

**2002 (Prescrire Int n° 67,61)**

- **Relapag° (aplastinase aflo) • Copifin° (1) • Protexel° (human protein C) • Stromectol° (ivermectin) (scabies)**

**2001 (Prescrire Int n° 53)**

- **Esterasein° (C7 esterase inhibitor) (1) • Trololox° (penicillamine) (chelator)**

**2000 (Rev Prescrire n° 214)**

- **Remicade° (infliximab)**

Drugs were included on the Honours List every year between 1981 and 2007. No drugs were included in 2008, 2009, 2011, 2012 or 2013. The full list of drugs included on the Honours List from 1981 to 2013 can be found in Prescrire International n° 147 page 79.

1- No longer marketed in France; 2- New data published after the inclusion of this drug on the Honours List led us to revise our rating, see Prescrire Int n° 67

---

**2014**

- **PHEBURANE° (sodium phenylbutyrate coated granules)** Lucane Pharma – Urea cycle disorders (Prescrire int n° 157)

**2014**

- **PHEBURANE° (sodium phenylbutyrate coated granules)** Lucane Pharma – Urea cycle disorders (Prescrire int n° 157)
Many factors are taken into account when analysing the quality of a drug's packaging and how convenient it is to use: the situations in which the drug will be administered; the patients concerned, in particular vulnerable populations such as children, pregnant women and elderly patients; and the setting in which it will be used (hospital or community) and supplied (on prescription only, over the counter at a pharmacy, or off the shelf).

Every aspect of the packaging articles, their quality, safety and dangers, are examined: the information on the labelling that is useful for patient care, especially the legibility of international nonproprietary names (INNs) and the dose strength; information presented graphically, such as dosing schedules and pictograms; any devices provided for drug preparation or administration; the quality and clarity of the patient leaflet, in particular information about how to prepare the doses to be administered, adverse effects, the situations and patient groups in which the drug is dangerous or must be avoided; and the measures taken to protect children from accidental ingestion.

The Packaging Awards are granted at the end of each year based on a review of the year's systematic analyses by Prescrire's Packaging Working Group, in total independence, free from any influence from pharmaceutical companies or packaging manufacturers. The rules governing the Packaging Awards are available online, at english.prescrire.org.
A few advances in 2014, but dire packaging persists. This year, for the first time, a child-proof cap was seen on a tube of cutaneous gel, namely brimonidine gel, authorised in the EU for the treatment of rosacea. This cap was difficult to unscrew in our tests and is a useful means of protecting children from accidental ingestion, which was reported during the development of this drug, provoking serious adverse effects (respiratory disorders, arrhythmia, psychomotor hyperactivity).

In contrast to this advance, numerous examples of dangerous packaging were again identified in 2014, with about 30 pharmaceuticals receiving a Red or Yellow Card.

This year’s Packaging Awards once again highlight the dangers of umbrella brands in the pharmaceutical field, in which similar-looking boxes obscure the fact that the products contain very different drugs.

2014 Prescrire Information Awards

The Information Awards focus on the information provided to Prescrire by the pharmaceutical companies whose products we examined in the New Products section of our French edition in 2014.

Prescrire’s reviews are based on a thorough literature search. Pharmaceutical companies hold a wealth of information on the drugs they market or withdraw from the market. Prescrire requests such data (mainly clinical data, packaging, and administrative and regulatory information) so that we can compare or add them to information obtained from other sources.

As is the case with the other Prescrire Awards, the Information Awards are granted in total independence, free from any industry or institutional influence. The rules governing the Information Awards are available online, at english.prescrire.org.

Some companies are transparent, others uncooperative. On the whole pharmaceutical companies provide Prescrire with a lot of information, some new and some that we have obtained elsewhere. Certain companies respond to our requests in a timely manner and provide us with relevant, detailed documentation, including unpublished data. These companies are placed on the Honours List. The companies rated as “Outstanding” provided us with exhaustive and detailed data, without delay and sometimes without being asked.

Other drug companies fail to respond to some or all of our requests for information, or provide only limited data. Some of them delay their response, then fail to provide usable information. Others omit the most relevant data. “Red cards” are given to highlight persistent shortcomings in the provision of information by some drug companies.

Yet transparency is a sign of a responsible company, determined to make health care safer by withholding none of the data obtained during the evaluation of their drugs, including their limitations.

©Prescrire

Honours List

(in alphabetical order)

- Outstanding:
  CTRS (Cell Therapies Research & Services), EG Labo, Lucane Pharma, Mayoly Spindler
- Followed by:
  Arrow Génériques, Bioprojet Pharma, GlaxoSmithKline, Mylan, Novartis Vaccines and Diagnostics, SERB

Red cards

(in alphabetical order)

Almirall, Bayer Healthcare, Biogen Idec, Bristol-Myers Squibb, Celgene, Genzyme (Groupe Sanofi), Gilead Sciences, Janssen-Cilag, Menarini, MSD, Novartis Pharma, Pfizer, Sanofi-Aventis

Yellow cards

- Azyter° eye drops (azithromycin) Théa (Rev Prescrire n° 369)
- Monoprost° eye drops (latanoprost) Théa (Rev Prescrire n° 366)
- Naabak° eye drops (N-acetyl-aspartyl-glutamic acid) Théa (Rev Prescrire n° 371)
- Tanakan° tablets (Ginkgo biloba) Ipsen Pharma (Rev Prescrire n° 365)

The primary packaging (single-dose containers or blister packs) of these four products fails to mention the nonproprietary name.

- Orofluco° capsule (fluconazole) Majorelle (Rev Prescrire n° 373)

The international nonproprietary name is not printed on the front of the box.

- Diffu K° capsules (potassium chloride) UCB Pharma (Rev Prescrire n° 369)

The strength is expressed differently on the various packaging articles, e.g. 313 mg of potassium on the box and 600 mg of microencapsulated potassium chloride on the blister packs, which could cause dosing errors.

- Selincro° (nalmefene) Lundbeck (Rev Prescrire n° 374)

The labelling of the blister packs is ambiguous: the packs are divided into pairs of tablets by perforations, and the international nonproprietary name and dose strength are printed just once across each pair of blister pockets. Patients could understand this to mean that the contents of two blister pockets correspond to one dose, leading them to ingest a double dose.

- Salbumol° 0.5 mg/1 ml solution for injection and Salbumol fort° 5 mg/5 ml solution for IV infusion (salbutamol) GlaxoSmithKline (Rev Prescrire n° 366)

The graphics on the two boxes are similar and they could be confused, resulting in dosing errors.
